MarketSurfer

# From sign-in to alerts: your first ten minutes

User guide 2 · Getting started

The order to follow on your first visit: sign in → see where Bitcoin sits → save a watchlist symbol → connect Telegram → get alerts, with the places people most often get stuck.

| | |
|---|---|
| Before you start | What opens without signing up |
| 1 · Sign in | Google |
| 2 · See where Bitcoin sits today | /en/live |
| 3 · Save one symbol to your watchlist | /en/watchlist |
| 4 · Connect Telegram | /en/account/telegram |
| 5 · Receive alerts | /en/account/notifications |
| 6 · Read beginner lesson 1 | /en/course |
| If you get stuck | Common questions |

**As of 2026-10-22** · screenshots 2026-10-25 · if this guide and the website differ, the website prevails.

Before you start

# Three things to know first

### What opens without signing up

4-hour and 12-hour support and resistance for every symbol, the fear & greed index, the kimchi premium and the macro calendar are visible without signing up.

### When you are asked to sign in

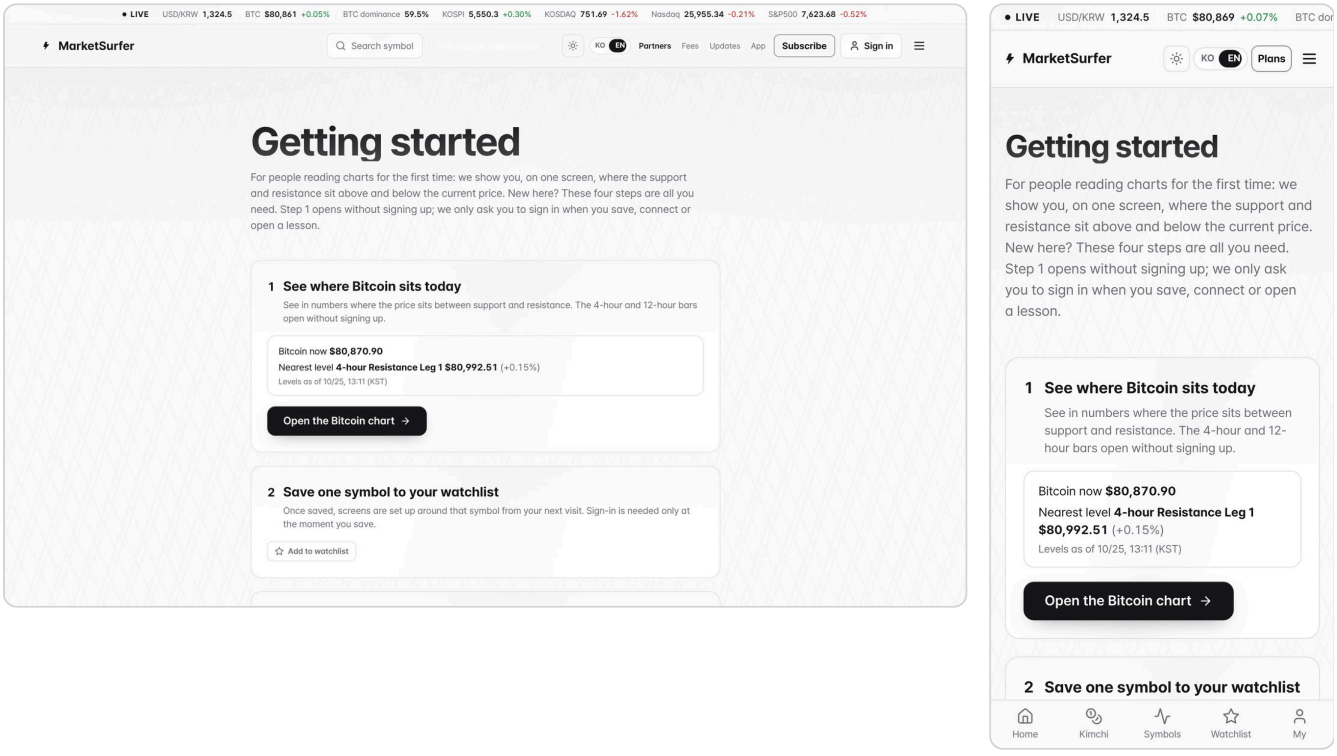

Only when you save a watchlist symbol, connect Telegram or open a lesson. No payment is needed for any of these.

### Telegram is optional

You can use the website without it. Connect it if you want the morning summary of your saved symbols and payment and expiry notices. Telegram messages are written in Korean.

### The getting-started page

The website's getting-started page `/en/start` shows the same four steps as this guide. This guide adds sign-in and alert settings in between.

Getting-started page — the four steps in order · left: desktop (1440px) · right: phone (390px) · captured 2026-10-25

Step 1

# Sign in

Press “Sign in” at the top right to open the sign-in page `/en/login`. Your first sign-in creates your account, and by signing up you agree to the terms of service and the privacy policy.

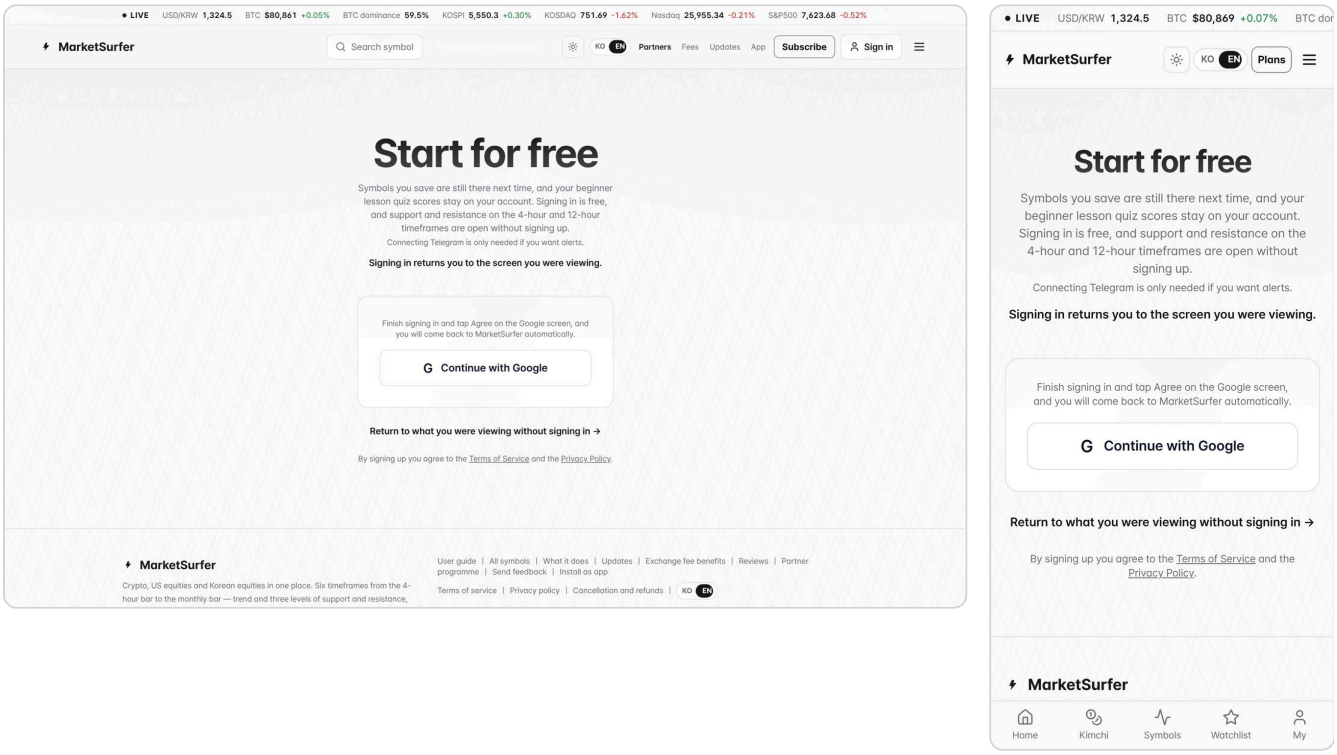

**a** **Continue with Google**

Finish signing in and tap Agree on the Google screen, and you come back to MarketSurfer automatically.

**b** **You return to the page you were viewing**

If you signed in while saving a symbol, you come back to that symbol's page. To go back without signing in, press “Return to what you were viewing without signing in”.

> **Google is the only sign-in on the English site.** Email sign-in is not available at the moment, and Kakao sign-in appears only on the Korean site. If you opened the link inside an app (for example Instagram or KakaoTalk), Google may refuse to sign in there — open the page in Safari or Chrome. The sign-in page shows the same notice with a button to copy the address.

Sign-in page on the English site — Google only · left: desktop (1440px) · right: phone (390px) · captured 2026-10-25

Step 2 · No sign-up needed

# See where Bitcoin sits today

See in numbers where the price sits between support and resistance. The 4-hour and 12-hour bars open without signing up.

1 **Open Bitcoin from the symbol search** /en/live/BTC

You can also type a name or ticker such as BTC, Samsung or NVDA. Crypto, US stocks and Korean stocks are found from one search box.

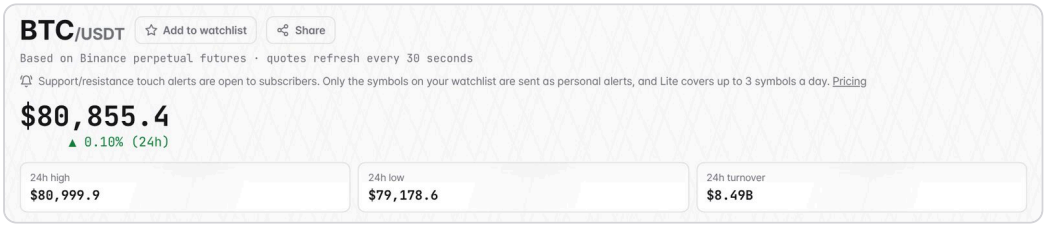

2 **Read the sentence at the top**

One sentence says which timeframe's trend the price is in and how many percent remain to the nearest support or resistance. The line below gives the close time of the bar it is based on.

3 **Switch the bar buttons**

Pressing 4h and 12h in turn moves the support and resistance even for the same symbol. That is expected. The lock on Daily and Weekly marks the range that opens for subscribers.

> Support and resistance are not places where the price must stop; they are reference levels to watch. They are recalculated each time a bar closes.

Chart and bar buttons — 4h and 12h without signing up; locked Daily and Weekly are the subscription range · 1440px wide · captured 2026-10-25

Step 3 · Sign-in needed

# Save one symbol to your watchlist

Once saved, screens are set up around that symbol from your next visit. Sign-in is needed only at the moment you save.

1 **The “Add to watchlist” button on a symbol page**

Press the star button next to the symbol name to save it. If you are not signed in, you go to the sign-in page and come back.

2 **Check it on the watchlist page** `/en/watchlist`

Saved symbols gather here. You can save up to 50 per market, and no payment is needed.

The watchlist page opens after signing in, so this guide does not show it. If you open the address before signing in, you are taken to the sign-in page.

Step 4 · Sign-in needed · no subscription

# Connect Telegram

Connect Telegram and you get a morning briefing on your saved symbols every day. You connect after signing in (no subscription needed). Please follow the on-screen instructions to connect.

1. **Open the Telegram connection page** `/en/account/telegram`

   You can also get there from “Connect Telegram” on your account page. The Telegram app needs to be installed.

2. **Press “Link automatically in Telegram”**

   The Telegram app opens the chat with the MarketSurfer bot (@bitsurfer_autobot). Just press [Start] and the connection is made.

3. **If it does not connect, send the command yourself**

   Copy **/link** and the 6-digit code with the copy button, paste it into the bot chat and send it. The code expires; when it does, press “Get a new code” for a new one.

4. **When the page moves on by itself, you are done**

   Once the bot finishes, the web page changes to “Linked” and takes you to your account. Your plan is reflected as soon as you connect.

> **Language.** If your Telegram app language is not Korean, the bot answers the start and linking steps in English. Channel posts, briefings and alert messages that follow are written in Korean. **The free channel and the bot are different.** The free channel (@bitsurferman) is where market summaries are posted to read; the connection and personal alerts are handled by the bot (@bitsurfer_autobot).

The Telegram connection page opens after signing in, so this guide does not show it.

Step 5 · After connecting Telegram

# Receiving alerts and choosing how

In alert settings `/en/account/notifications` you choose what to receive and when.

| Setting | What it does |
|---|---|
| **Morning briefing on my symbols** | A DM every day at 09:00 Korean time, based on your saved symbols. |

| Setting | What it does |
|---|---|
| **Night-time quiet hours** | No personal DMs during the hours you set (Korean time). |
| **Alerts by content** | Choose which published content you receive as a bot DM. Content you switch off can still be seen in the Telegram channels. |

### Alerts by plan

| Alert | Who receives it |
|---|---|
| Morning briefing on saved symbols | Members who connected Telegram (no subscription needed) |
| Personal DM when a watchlist symbol reaches its price | Lite · Standard · Premium (Lite: up to 3 symbols a day) |
| Screener saved-condition alerts (up to 10) | Lite · Standard · Premium |
| Watchlist support, resistance and pivot proximity alerts | Standard · Premium |
| Real-time Telegram push of publications | Premium |

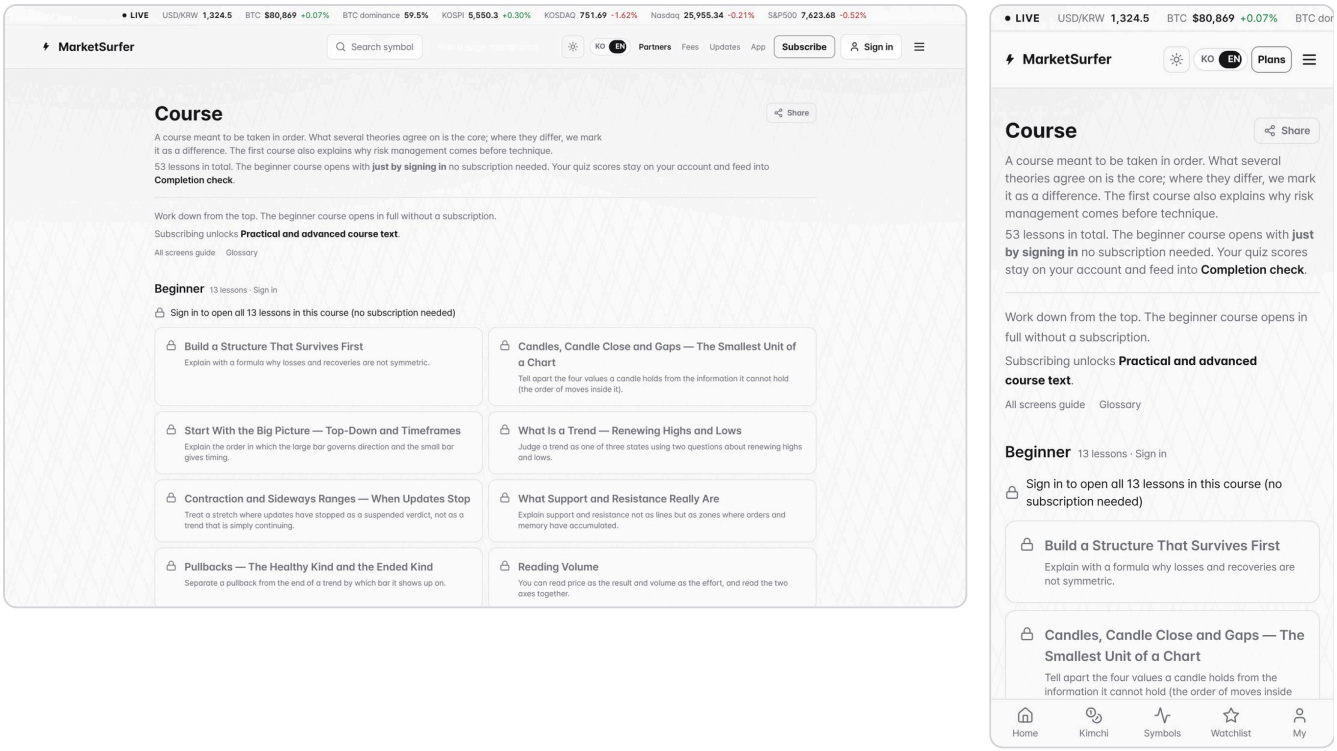

Turning alert subscriptions off stops only personal DMs; channel posts continue. You can install the website on your phone's home screen like an app `/en/install`, but installing it alone does not send alerts. Alerts come through Telegram, in Korean.

**Step 6 · Sign-in needed · no subscription**

# Read beginner lesson 1

The first beginner lesson, «Survive first». Before charts, it covers why you decide how much you can lose. The full text opens once you sign in (no subscription needed).

The course `/en/course` is split into a 13-lesson beginner track, an 18-lesson practical track and a 22-lesson advanced track, and the course pages are available in English. The beginner track opens in full once you sign in; the practical track opens from Lite and the advanced track from Standard. Answering the check questions at the end of a lesson records it under “Course completion” on your account.

Course page on the English site · left: desktop (1440px) · right: phone (390px) · captured 2026-10-25

If you get stuck

# Common sticking points

### The bot does not answer /link

If you have never chatted with the bot, commands do not work yet. Press [Start / START] in the bot chat or send any message once, then send the /link command again.

### “This Telegram account is already linked”

That Telegram account is already connected to another MarketSurfer account. Sign in with that account or use a different Telegram account. If it is still not solved, tell the operator (Telegram @hoban_honey).

### The code has expired

Press “Get a new code” for a new 6-digit code and send that one.

### Alerts do not arrive

Check that you finished connecting Telegram, have not blocked the bot, and have pressed /start once in the bot chat. No personal DMs are sent during your quiet hours.

**A figure reads “not yet compiled”**

It means the value has not arrived yet. It is updated when the bar closes.

**I want to know what each page shows**

The website's guide `/en/guide` and “User guide 4 · Screen map” list it page by page.
