MarketSurfer

71 pages: what each one shows

User guide 4 · Screen map

Every main page of the website, grouped. For each page: what it is for, how to read it, and what a subscription adds. The wording is the same as the website guide. Pages whose content is published in Korean are marked.

Quotes and charts	11 pages
Whole-market state	6 pages
What MarketSurfer found	14 pages
Market backdrop	12 pages
What MarketSurfer sent	4 pages
Mine	3 pages
Where you learn	9 pages
Account and information	12 pages

As of 2026-10-22 · screenshots 2026-10-25 · if this guide and the website differ, the website prevails.
www.marketsurfer.co.kr/en · Telegram bot @bitsurfer_autobot

Quotes and charts

This is the screen for looking at one symbol on its own.

Find a symbol

/en/live

Quotes and charts for crypto, US equities and KOSPI equities, symbol by symbol.

Search by name or ticker and the support/resistance MarketSurfer computed is drawn on that symbol's candles.

With a subscription · Support, resistance and reference lines on daily and higher timeframes

Combined levels

/en/levels

Scan support and resistance for every symbol in a single table.

See where each symbol sits right now, without opening them one by one.

With a subscription · Daily, 3-day, weekly and monthly timeframes, all symbols

Coinbase premium

/en/coinbase-premium

See how far the Coinbase USD price and the exchange USDT price are apart, for Bitcoin and Ethereum.

Check whether the gap is positive or negative and where it sits against past values. This table shows a price gap; it does not tell you a direction.

No lock shown in this guide

Expected range

/en/ranges

See the expected range of the next single bar for every symbol, in one table.

The marker on the bar is where price is now. Near the top means little room left above; near the bottom means little room left below. It is a statistical range, so price can move outside it.

With a subscription · Daily, 3-day, weekly and monthly timeframes, all symbols

Option open interest

/en/options

Open interest by option expiry for US equity symbols.

Shows exactly which strikes open interest is clustered at. It records where open interest sits; it does not mean price will go there. Data can lag, and symbols with no listed options do not appear.

No lock shown in this guide

Today's movers

/en/leaderboard

Today's biggest gainers and decliners, and the highest turnover.

Start here when you want to see what moved first.

With a subscription · The remaining overlapping symbols and which timeframes are aligned

Market heatmap

/en/heatmap

Puts moves across all three markets on one color-coded screen.

Where green clusters is where prices rose today. Deeper color means a larger move.

With a subscription · Whether a rise came in symbols with heavy money behind them

Market cap ranking

/en/rank

Shows crypto, US and Korean stocks in order of market cap.

Market cap ranks by size only; it does not say whether a symbol is good or bad. Crypto updates once a day and stock market caps once a month, so read the as-of date above the table too. Use the star on a row to add it to your watchlist.

No lock shown in this guide

All symbols /en/symbols

A list of crypto, US and Korean stock symbols grouped by market and sector.

Each symbol shows its 4-hour trend direction. Tap a symbol to open its support and resistance screen.

No lock shown in this guide

Compare symbols /en/compare

Puts the key numbers for several symbols side by side.

Use it to see which of two is stronger.

With a subscription · Trend alignment on the daily timeframe and above, and two-way scenarios

Equity quotes /en/stock

Quotes for KOSPI and US equity symbols, symbol by symbol.

Read it the same way as crypto. Equity prices only move while the market is open.

With a subscription · Support, resistance and reference lines on daily and higher timeframes

> **What is in English and what is not.** The website pages, buttons and guides open in English at the addresses starting with **/en**. A few things are still Korean only: published reports and the publication library, Telegram channel posts, briefings and alert messages, and the operator's live commentary. If your Telegram app language is not Korean, the bot answers the start, account-linking and partner commands in English. Some labels, sector names and symbol names on a few pages (for example the market dashboard, heatmap and sectors) also still appear in Korean.

02 / 08

Whole-market state

This is the screen for how the market looks right now, rather than any single symbol.

Market overview /en/dashboard

Brings the state of all three markets and what was detected today onto one screen.

Start your day here and you have the whole picture.

With a subscription · Context such as accumulation/distribution, flows, smart money and short selling

Fear and greed /en/fear-greed

Shows market sentiment for crypto, Nasdaq and KOSPI on a 0-100 scale.

24 and below is extreme fear; 75 and above is extreme greed. The 40-60 band tells you almost nothing.

No lock shown in this guide

Kimchi premium

/en/kimchi

How much more expensive Korean exchange prices are than overseas.

A wide premium means domestic demand has piled in; a negative one means the opposite.

No lock shown in this guide

Dominance

/en/dominance

Bitcoin's market-cap share of the whole market, and the altcoin environment.

When dominance rises, Bitcoin's share has grown; when it falls, the altcoin share has grown. Price moves alone change it, so it is not evidence of money moving.

No lock shown in this guide

Sector rotation

/en/sectors

Which themes and sectors are rising or falling, measured by price change.

Switch the period between daily, 3-day, weekly and monthly to tell sectors that jumped for a single day from those that have been strong for weeks. Stock sectors are the average move of their symbols; turnover-share shifts appear only for crypto sectors.

No lock shown in this guide

Economic Calendar

/en/calendar

The calendar of volatility events such as FOMC and CPI.

Use it to know high-volatility days in advance and size positions accordingly.

No lock shown in this guide

03 / 08

What MarketSurfer found

Screens where MarketSurfer has already picked out symbols that meet a condition.

Screener

/en/screener

Apply conditions and keep only the symbols that meet them right now.

Try a preset first, and if there are too many results add conditions one at a time to narrow it down. The table lists support and resistance 1 through 3, so you can see the next level without opening the symbol.

With a subscription · Daily and higher, full list, distance to resistance and to invalidation, MarketSurfer watchlist, turnover, market conditions, condition alerts

Accumulation and distribution

/en/wyckoff

Ranges where price is boxed in within a band.

Inside the box no direction is settled. Which side it breaks out of is the outcome.

With a subscription · Full list

Levels price may revisit

/en/ict

Whether clustered stops were swept, and whether the previous day's high or low was taken.

Highs and lows clustered at the same level are where stops build up. Price often runs those levels and then turns.

With a subscription · The reference price at that level, and the full list

Sloped channels

/en/angle

Sloped reference lines and the symbols currently near that grid.

A grid built by copying a line drawn through past highs and lows at even spacing. Because the lines are sloped, the same line sits at a different price as bars advance. What matters is the reaction at the touch; reaching a line is not itself a direction.

With a subscription · Get it as an alert

Previous trend close

/en/trend-close

Symbols that closed beyond a reference line on any daily-or-higher timeframe.

Some of the daily, 3-day, weekly or monthly bars may still display the opposite way. The display changes only after that bar closes, so the crossing and the on-screen state can look out of step for a while. Crossing does not guarantee direction.

With a subscription · All symbols and the criteria used

Volume surge

/en/volume-alerts

Symbols trading far more than usual.

Volume is the size of attention. You still have to confirm direction separately.

With a subscription · All symbols beyond the top 3 per market

Derivatives dashboard

/en/derivatives

Funding, open interest and positioning skew on one screen.

When positioning is one-sided, liquidation pressure builds in the other direction. Skew by itself is not a forecast.

With a subscription · All symbols and the basis for detection

Liquidation record

/en/liquidations

See at which price ranges liquidations have already happened.

Clusters of liquidations mark places where price moved sharply. To see where still-open positions would be liquidated, use the liquidation map.

No lock shown in this guide

Liquidation map

/en/wallets?view=liq

Collects the prices at which still-open positions in public wallets would be liquidated or stopped out.

This differs from liquidations that already happened (liquidation history). If price reaches that level, forced liquidations may fire together — it does not mean price stops there.

With a subscription · The stop-order map and wallets that placed limit walls

Order book heatmap

/en/orderbook

See, minute by minute, how much unfilled order size is resting at each price.

Orders split into small pieces across several prices are merged into price buckets, so they show up as one cell. Resting orders can be cancelled at any time, so a cell does not mean price will stop there.

With a subscription · Full 4 hours · Ethereum · same-size evenly spaced order groups · orders posted together at the same moment

Wallet tracker /en/wallets

See what the Hyperliquid wallets with the largest positions and the top 30-day P&L are holding right now.

Click a wallet to see its current positions and the large changes it made over the last 30 days. No names are attached, and adding to a position is not a forecast of direction.

With a subscription · All wallets on the board · per-wallet entry and liquidation prices and change history

MarketSurfer watchlist pool /en/interest

Every symbol MarketSurfer has automatically picked and kept.

Which condition brought each one in is written alongside. The list is not a judgement, so open the symbol and check the level.

With a subscription · The whole pool beyond the one-symbol preview

Trend change history /en/trend-history

Records when the flow changed, across 3 markets and 6 timeframes.

Look at when it changed, not just how it stands now. The more recent the change, the less confirmed it is.

With a subscription · Turn records on daily and higher timeframes

Top-trader positioning /en/smart-money

Aggregates exchange-published top-trader long/short ratios and the positions of Hyperliquid's most profitable wallets.

Someone else's position is a reference, not a reason. Look only at the direction and size of the skew.

With a subscription · The full version of the briefing

04 / 08

Market backdrop

This screen shows the backdrop of the whole market rather than any single symbol.

Market news /en/news

Collects crypto, US equity and KOSPI news by market.

Price often moves first and the news follows. Use it to check the backdrop of a move that already happened, rather than to pick a direction.

No lock shown in this guide

Language · Headlines come from Korean and other media in their original language.

Earnings /en/earnings

Earnings dates and results for large US companies.

Check the reporting date for anything you hold, in advance. On the day of a report the usual levels tend not to hold.

With a subscription · Recent announcement results

Fund flows /en/flows

Spot Bitcoin and Ethereum ETF flows.

Look at whether the same direction persists for several days. A single day is noisy.

With a subscription · Daily ETF flows and ETH breakdown

FX rates /en/exchange

The KRW/USD rate in real time.

When the exchange rate rises, holding overseas assets becomes more costly from Korea. Reading it together with the Kimchi premium makes the meaning clearer.

With a subscription · Support/resistance and trend on the daily, 3-day, weekly and monthly timeframes

Correlation

/en/correlation

Whether symbols move together or separately.

Holding several symbols that move together is the same as holding one of them in size.

No lock shown in this guide

Seasonality

/en/seasonality

How past results looked by month and by weekday.

It is only a past average and does not mean this time will match. Use it as backdrop, not as a reason.

No lock shown in this guide

Halving

/en/halving

The time remaining until the next bitcoin halving.

The schedule itself is fixed. There is no guarantee price moves along with it.

No lock shown in this guide

Cycle position

/en/cycle

See what multiple of its 200-week and 2-year moving averages the Bitcoin price stands at.

Shows whether the multiple sits in a low or high zone, refreshed once a day with the as-of time and source. It is a position within past ranges, not a sign of the next direction.

No lock shown in this guide

Exchange comparison

/en/exchanges

Fee benefits at partner exchanges and the events now running.

The fee terms differ by sign-up link. Check the terms and the event period before choosing an exchange. This screen does not compare prices between exchanges.

No lock shown in this guide

Exchange events

/en/event

Events you can join through a MarketSurfer link.

The eligibility conditions are stated first. If they do not apply to you, you will not be entered, so check the conditions first.

No lock shown in this guide

Partner programme

/en/partner

What you earn when an introduction leads to an actual payment — the commission terms.

Rates, settlement timing and attribution rules are all written here. Payouts are based on the VAT-excluded supply price, not the gross payment — start with the example table.

No lock shown in this guide

Partner results and settlement

/en/partner/dashboard

See your progress and the next step. Sign-in required.

Your code and link are sent only in the bot chat, never printed on screen — so no one next to you can see them. If Telegram is not linked yet, linking comes first.

No lock shown in this guide

05 / 08

What MarketSurfer sent

The screen for reviewing on the web what went out on Telegram.

MarketSurfer publications

/en/reports

A list of what MarketSurfer sends and when.

Knowing which publication goes out at what time makes it easier to find one you missed.

With a subscription · The body of subscriber posts

Language · Published reports are written in Korean.

My briefing

/en/briefing

A briefing covering only your own watchlist.

Add stocks to your watchlist first to see content here.

With a subscription · Daily and higher content

Library

/en/library

The full text of past publications, made public here.

This is the past, not the present. It is for checking what was seen at the time, and how.

No lock shown in this guide

Language · Published items are kept in Korean, as they were sent.

Sample of published content

/en/content

Examples of the formats content goes out in.

See what you will receive before subscribing.

No lock shown in this guide

06 / 08

Mine

Sign in and it switches to your own symbols.

Watchlist

/en/watchlist

Where you register the symbols you follow.

What you register here is what the desk and the alerts work from. Register first.

No lock shown in this guide

Desk

/en/desk

Brings onto one screen what happened to your symbols today, and what MarketSurfer published today.

This is the first screen for subscribers. Unread items are marked, so nothing disappears if you scroll past it.

With a subscription · This screen is for subscribers

Alert archive

/en/feed

Search every alert sent so far.

Use it to find an alert you missed, or to retrace what was judged in the past.

With a subscription · Alert content

Where you learn

Screens for reading and practice.

Course /en/course

A course running in order from risk management through practical and advanced material.

Work down from the top. The beginner course opens in full without a subscription.

With a subscription · Practical and advanced course text

Short reference notes /en/learn

Short, one-piece-at-a-time material that supports the main courses.

When a term comes up in a course that you do not know, look it up here.

With a subscription · Advanced edition — entries with the operator's practical commentary

Glossary /en/glossary

Look up what the terms on screen mean.

When an unfamiliar word appears, search for it here.

No lock shown in this guide

Support & Resistance Practice /en/practice

Draw lines on real past 4-hour candles, then reveal the hidden candles that followed to see whether price reacted at them.

Use it to find the places covered in the course yourself. The coin and period are shown when you reveal.

No lock shown in this guide

Calculator /en/tools

Works out a position size that fits your stop distance.

Set the stop level first, then size down to fit that distance.

No lock shown in this guide

Record cards /en/records

Write down what the lessons ask you to try, with your own values, and check the counts and sums.

Entries stay only in this browser. Read the matching lesson, then fill in the card.

No lock shown in this guide

Verification system /en/verification

Publishes the criteria by which our published content is scored.

This is where the criteria are written down in advance, so they are not changed after the results come in.

With a subscription · The hit record of past 4-hour and 12-hour levels

Community /en/community

A place to look together and check together.

It is for pointing out the spots you miss on your own.

No lock shown in this guide

Reviews /en/reviews

Notes left by the people who use it.

Pick a question and write at length about what changed or what you learned. We do not publish only the good ones.

No lock shown in this guide

Language · Reviews are shown as members wrote them, mostly in Korean.

08 / 08

Account and information

The screens for signing up, linking and subscribing.

Install as app /en/install

How to install it as an app on your home screen, written per device.

The install banner never reappears once dismissed, and some browsers never show it. If you want to install later, come here.

No lock shown in this guide

Getting started /en/start

Walks a first-time visitor through what to do, in order.

Follow this order and your initial setup is done.

No lock shown in this guide

What it does /en/features

Explains what MarketSurfer is as a service.

How to use each screen is here in this guide; the service itself is explained there.

No lock shown in this guide

Subscription guide /en/pricing

Compares what free and subscription each open up.

Check here whether the screen you just hit opens with a subscription.

No lock shown in this guide

Premium /en/premium

Collects what is open to subscribers only.

Opens with a subscription.

With a subscription · This screen is for subscribers

Change referrer /en/referral

Referral information.

For the details, read the conditions exactly as written on screen.

No lock shown in this guide

Send feedback
/en/feedback

Where to send things you would like fixed.

Telling us which screen and what looked wrong is the fastest route.

No lock shown in this guide

Updates
/en/updates

What was fixed and what was newly opened, by date.

If a screen you use looks different, check here first for what changed that day.

No lock shown in this guide

Telegram linking
/en/account/telegram

Links your web account to Telegram.

Once linked, Telegram alerts follow the settings you choose on the web.

No lock shown in this guide

Terms of Service
/en/terms

The terms of use for the service.

Read it once before signing up.

No lock shown in this guide
